# Be the Difference Lean Forum

Selecting Lean Process Improvement Projects October 13, 2011

## Questions to ask

#### 1. Defect Reduction

- Is any scrap produced by the process?
- Is anything falling outside of the desired specifications?
- Where are high volumes of defects and/or rework occurring?
- Does the process have a high degree of variation?
- Where do inputs need controls in order to produce a consistent output?
- Can scientific adjustments to the process create robust changes?

#### 2. Cycle Time Reduction

- Are there any processes that rely on multiple hand-offs between individuals?
- Is the process producing less than expected?
- Is the process requiring a lot of overtime?
- Is the process bogged down with computer/machine downtime?

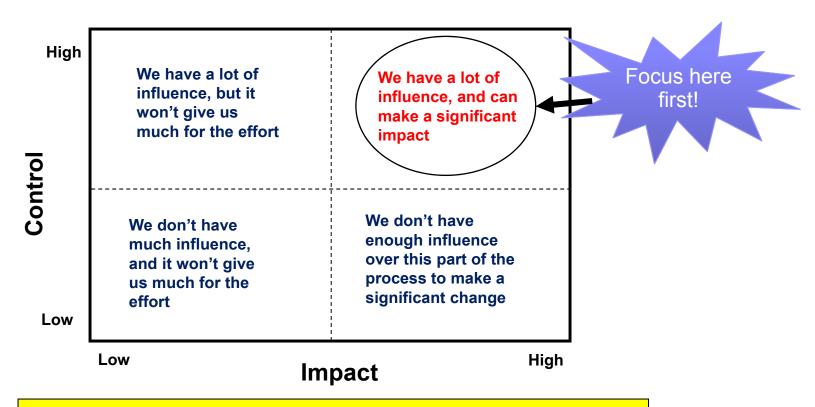

#### 3. Resource Consumption Reduction

- Does the process experience high variation in the material consumption?
- Is the process requiring more labor to do the job?

## Target High Impact Candidates

Target Candidates with High Influence/Impact: concentrate on parts of the process that you can actually influence & make an impact

How much influence can you have over the end-to-end process?

# Sizing the Effort

#### Don't Boil the Ocean

**End World Hunger** 

# Size Appropriately for Calm Seas

Improve cycle time to deliver food to hungry people in a specific area by 10%

Improve Revenue Collection

Reduce cycle time for revenue collection from licensing by 10%

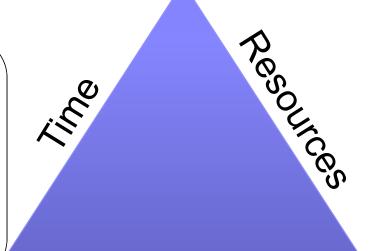

### Prioritize Process Candidates

Prioritize the high impact projects by assessing time, resources,

and benefits:

- What is the process duration?
- How urgent is the process?
- Will systems analysis or development be required?
- Are there concurrent projects underway?

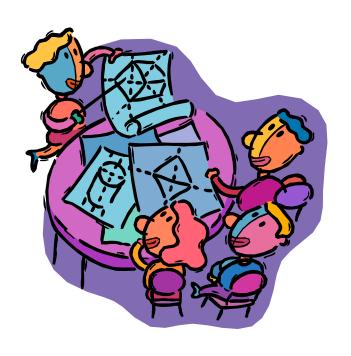

- What are the core team requirements?
- What degree of Subject Matter Expert (SME) commitment is required?
- What is the availability of the data?
- Will systems analysis or development be required?
- Are there concurrent projects underway?

#### **Benefits**

- What is the business impact?
- What is the customer impact?
- What are the ties to the strategic plan?
- Is there an opportunity to leverage the work across departments/agencies?
- Does this process reduce a significant business risk?

# Group Exercise

 Brainstorm a list of potential process improvement opportunities

## **Process Selection Tool**

| Dept Name              |  |
|------------------------|--|
| Date:                  |  |
| Prepared By:           |  |
| Prepared By:<br>Notes: |  |

| Key Criteria  | ¥eight | Concept A | Concept B | Concept C | Concept D | Concept E | Concept F | Concept G | Conc          |
|---|--------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|---------------|
| Is it likely that the project can be  |        |           |           |           |           |           |           |           | $\overline{}$ |
| completed in 3-6 months?  |        | l         |           |           |           |           |           |           | 1             |
| Does the project represent a  |        |           |           |           |           |           |           |           | $\overline{}$ |
| significant   |        | l         |           |           |           |           |           |           | 1             |
| improvement in quality?   |        | l         |           |           |           |           |           |           | 1             |
| Does the project justify the  |        |           |           |           |           |           |           |           |               |
| deployment  |        | l         |           |           |           |           |           |           | 1             |
| of a project team?  |        |           |           |           |           |           |           |           |               |
| Does it appear a minimum of   |        |           |           |           |           |           |           |           | $\overline{}$ |
| investment  |        | l         |           |           |           |           |           |           | 1             |
| will be required to solve the   |        | l         |           |           |           |           |           |           | 1             |
| problem?  |        |           |           |           |           |           |           |           |               |
| Do you have data on the process   |        |           |           |           |           |           |           |           |               |
| and has it been validated?  |        |           |           |           |           |           |           |           |               |
| Will success significantly improve  |        |           |           |           |           |           |           |           |               |
| customer satisfaction?  |        |           |           |           |           |           |           |           |               |
| is the process currently measured?  |        |           |           |           |           |           |           |           |               |
| Is the process measurable?  |        |           |           |           |           |           |           |           |               |
| Is it likely that the solution will be<br>highly leverageable?              |        |           |           |           |           |           |           |           |               |
| Is the scope of the proposed project<br>appropriate?                        |        |           |           |           |           |           |           |           |               |
| Is this a candidate for process<br>improvement or a "Just Do It"<br>effort? |        |           |           |           |           |           |           |           |               |
| Is success likely?  |        |           |           |           |           |           |           |           | $\vdash$      |
| Criterion 13  |        |           |           |           |           |           |           |           |               |

Weighs Criteria of various concepts (projects) and ranks them

### Make Final Selection

- Rank the processes, taking into account Time, Resources & Benefits
- ☐ Assess which efforts have the **highest urgency** and most likelihood of adequate resources
- Make informed recommendations to select projects that will yield the highest benefits within the constraints of the business
- □ Create a group that records, updates, maintains and regularly reviews the list of potential projects
- □ Create an organizational list so that various groups can see project ideas from other areas
